

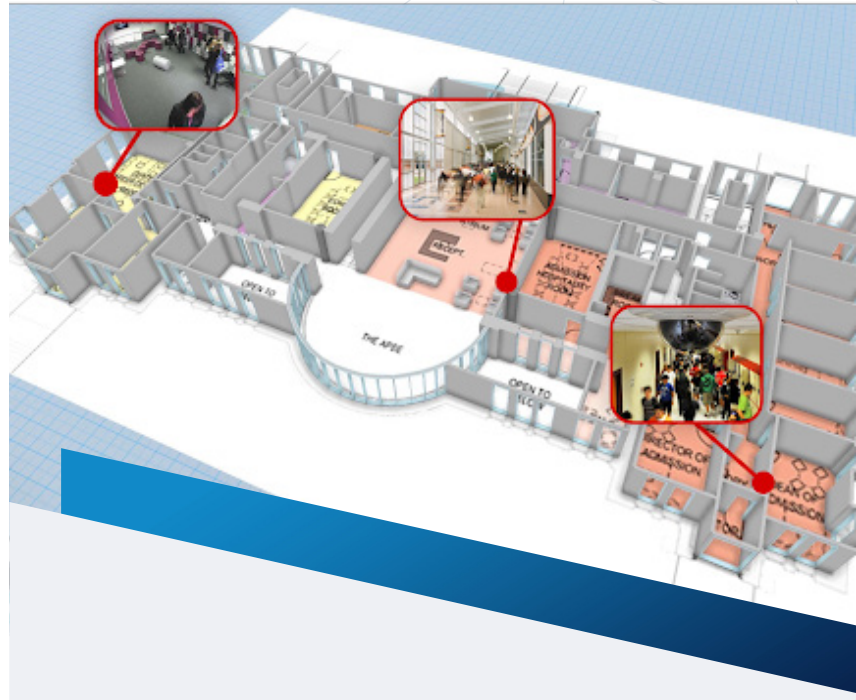

MAPPING

CoreSpec 3D

Introduction

CoreSpec 3D, a Salt Lake City AI tech company, specializes in advanced image recognition and 3D scene generation. Their technology enables users to swiftly generate editable, interactive 3D scenes from simple 2D floor plans. These user-generated 3D scenes can help customers accomplish projects spanning security logistics, layout designs, event planning, maintenance, and more. The company's easy scene sharing has immediate application to property management, with a keen eye on public safety.

Solution

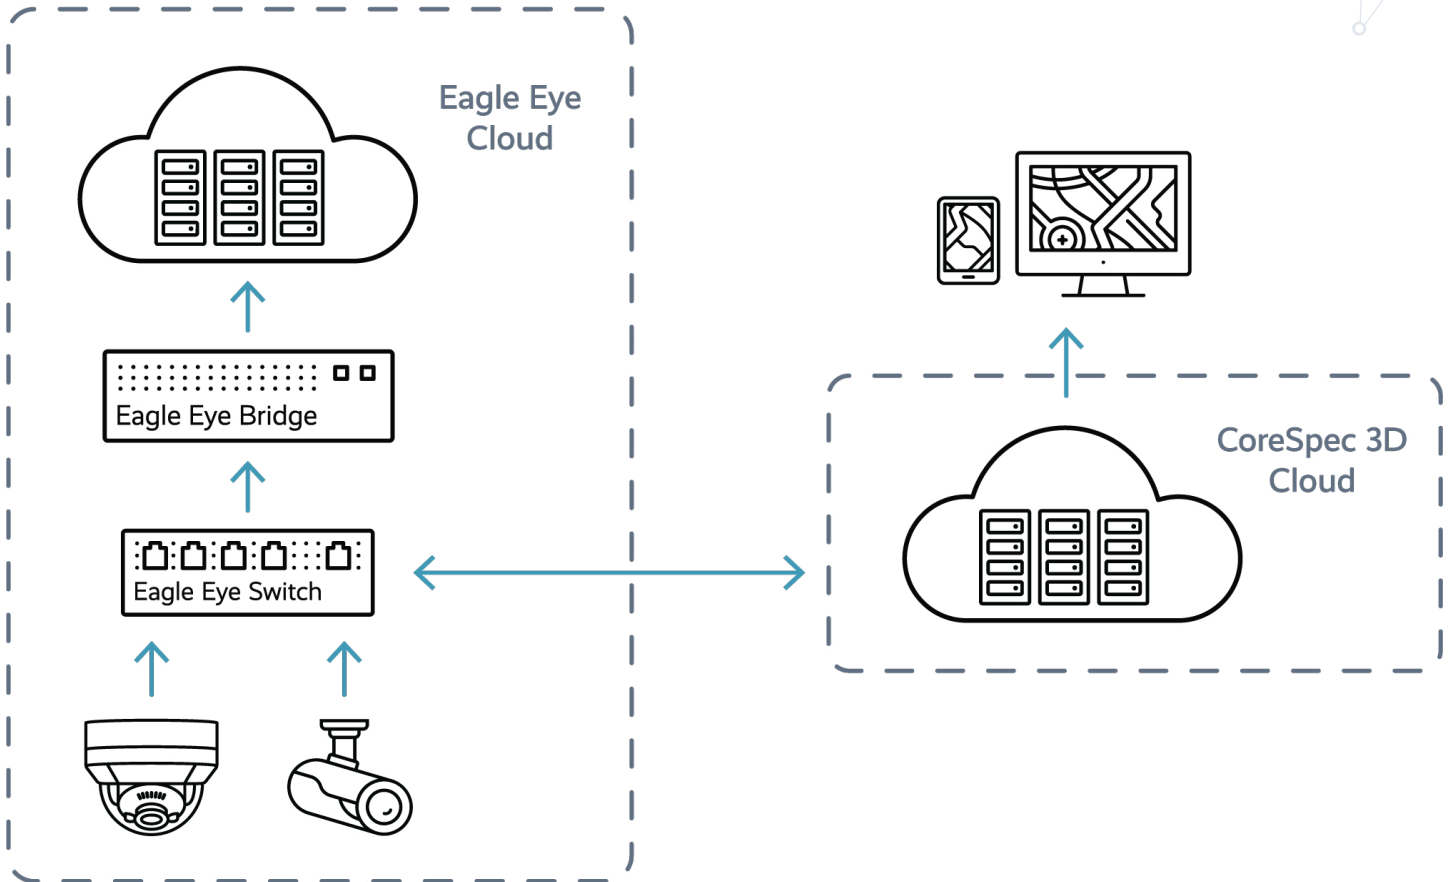

Benefits of the Integration

For Eagle Eye Networks resellers and partners, the core benefit is to increase sales, both to new customers and (in the form of upgrades) to existing customers. By integrating with Eagle Eye Networks V3 Video API Platform, CoreSpec 3D software can re-display camera feeds as needed. The software's self-service features mean that resellers, installers, and end customers can update camera additions and feeds.

For end users, the 3D scenes allow an intuitive view of the location, viewing angle, and video streams from all Eagle Eye connected cameras, which enables on-site security teams and first responders to more efficiently get to locations.

Eagle Eye Networks

Partner Requirements

- Access to Eagle Eye API
- Customer authentication portal pass-throughs

Support

Monday - Friday 8:00 AM MST - 6:00 PM MST
