CLOUD-BASED ACCESS CONTROL

Kisi

Introduction

Kisi is a cloud-based access control system that creates a secure future by offering businesses a connected, easily accessible, and secure building ecosystem. The integration with Eagle Eye Networks provides additional video management functionalities enabling businesses to further streamline and safeguard entrance operations and swiftly mitigate potential incidents. The Kisi and Eagle Eye Networks integration is incredibly easy for current customers to enable and get started.
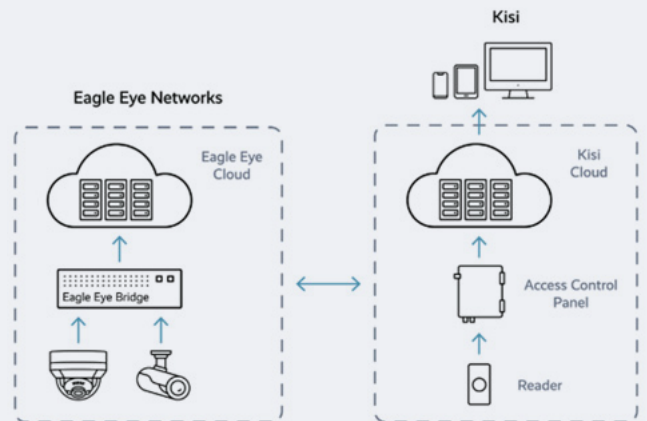

Solution

This integration adds advanced monitoring capabilities to admins that can manage access to all their spaces on the fly and remotely grant and revoke access in seconds with Kisi's intuitive dashboard or mobile app. This technical integration enables users to quickly pull video associated with a door event or activity from the Eagle Eye VMS and to display it within Kisi. These crucial access events include people entering or exiting a building, a door being held or propped open, or potential facility break-in attempts.

Benefits of the Kisi and Eagle Eye Integration:

- 24/7 operational spaces remotely managed from a single dashboard
- Seamlessly secured and easily accessible doors
- Entrances and meeting room monitoring
- Streamlined visitor access and remotely managed access privileges based on user, group, or membership levels.
- Integrated camera networks and access control system for a completely secured ecosystem
