PHYSICAL ACCESS CONTROL

Brivo

Introduction

Brivo is the global leader in mobile, cloud-based access management and smart spaces platforms for commercial real estate, multifamily residential and large distributed enterprises. With a robust, security-first approach, Brivo offers a cloud-based platform, providing flexible physical access control for properties and facilities. Leveraging AI-driven analytics, Brivo provides insights to understand facility usage patterns and assess threats and anomalies. With Brivo, employees and other trusted individuals can access facilities and spaces based on easily managed rules with fine-grained access rights. Users have the flexibility of credentials to open doors - on the mobile, badge, or fob credentials.

Solution

Eagle Eye Cloud VMS (Video Management System) is fully integrated with the Brivo access control system, so any Eagle Eye Networks customer can implement sophisticated access controls that take advantage of the phones users are already carrying. With an integrated Brivo deployment, users can match each recorded door access with recorded video.

The Eagle Eye Cloud VMS works in tandem with Brivo and can also sort expected events (such as employees arriving for the start of a workday) from unusual or anomalous ones, such as an entry long after the end of a working day, or an attempt to enter an area for which a user is not cleared.

Brivo and Eagle Eye: Protecting people and assets

The Eagle Eye Networks integration with Brivo is simple to set up and manage and leverages the security-first approach of all Eagle Eye Networks infrastructure. Brivo's smart sensors and locks use app-based or physical tokens to govern access to premises, and communicate directly with the Eagle Eye Video API Platform to record each entry or entry attempt.

Meanwhile, Eagle Eye Networks systems securely store and transmit all video data with industry-standard, bank-level encryption, and isolates your camera infrastructure from your business IT network.
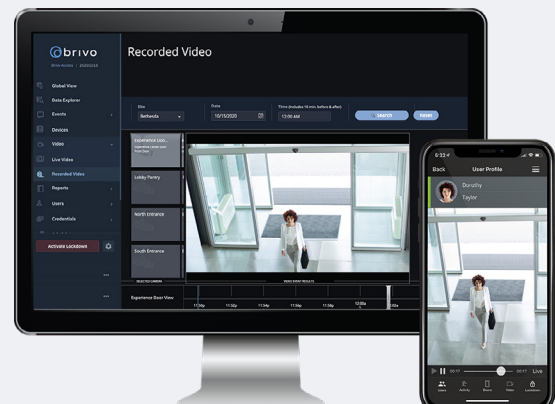

Benefits

Frictionless premises access: Authorized employees, tenants, or authorized visitors can enter without frustration or physical keys. The partnership of Brivo and Eagle Eye Networks results in a seamless experience within Brivo Access, without the need for third-party connectors or protocol translation.

Flexible event-based alerts: Zoom in on video associated with entry events, across the entire organization; detect and alert on tailgating, mask use, and other parameters.

Safety and security monitoring: Be alerted, and watch the video (in real time, or recorded), to help assure user safety.

Integrated video analytic events: View Eagle Eye analytic events in Brivo Access, including displaying loitering, tampering and line crossing events.

Unified asset protection: Global view of every asset guarded by a Brivo-connected lock; an open platform that connects to your proptech ecosystem.

Secure, cloud-first approach: Cyber-hardened and proven cloud leadership; automatic upgrades as new features or capabilities become available. No port forwarding and camera tunneling are required; the Eagle Eye VMS transmits fully encrypted video and data via secure APIs.

Future-proofed technology and infrastructure: Simple, scalable tools that mesh to work as one; easy to buy, service, and support from one local dealer network.

Multi-platform control and management: Use Brivo Access to play back recorded video or view live streams, on desktop or mobile devices.
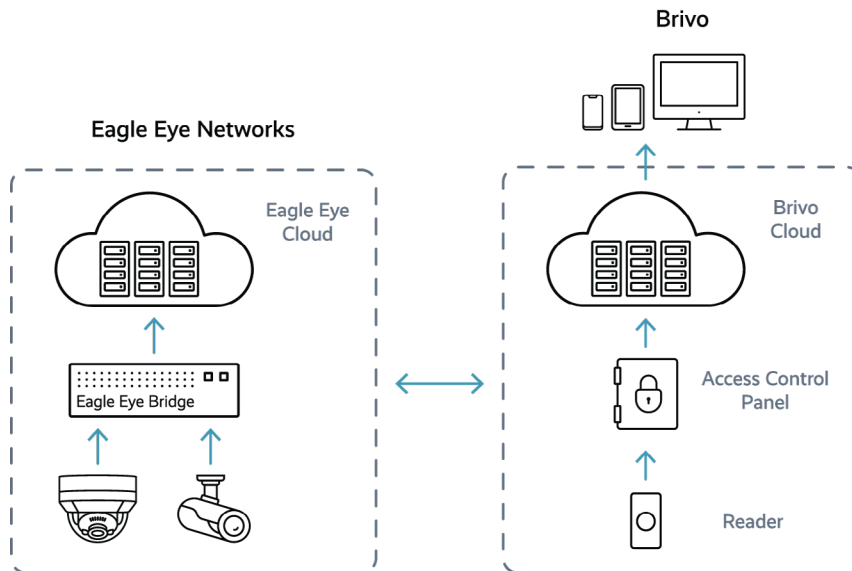

Availability

The Brivo integration is available at no additional cost for all Eagle Eye Cloud VMS Editions. Some features may carry an additional set-up or ongoing cost.
